UNDERSTANDING THE ENVIRONMENT OF CISCO PACKET TRACER TO DESIGN A SIMPLE NETWORK

AIM:

To study the environment and user interface of Cisco Packet Tracer and understand how to design a simple computer network using network devices and connections.

ALGORITHM:

1. Download Cisco Packet Tracer from the Cisco Networking Academy website and install it on the computer.
2. Launch Cisco Packet Tracer and observe its user interface.
3. Identify the menu bar, main toolbar, workspace, common tools bar, simulation controls and network component box.
4. Select the End Devices category from the network component box.
5. Drag and drop four PCs into the logical workspace.
6. Select the Network Devices category and choose a suitable switch.
7. Place the switch in the workspace.
8. Select the Connections option and choose a Copper Straight-Through cable.
9. Connect each PC to the switch using the cable.
10. Observe the connection indicators and verify that the links become active.
11. Save the network design for future use.

OUTPUT:

A simple network topology containing four PCs connected to a switch was created successfully in Cisco Packet Tracer. The user interface and different tools used for designing a network were identified and studied.

RESULT:

Thus, the environment and user interface of Cisco Packet Tracer were studied, and a simple network consisting of four PCs connected to a switch was designed successfully.
